

WHAT IS CLAIMED IS:

1. An organizer for the storage of jewelry, the organizer comprising:
 - a top section, the top section having a pivoting cabinet having a groove formed therein and a separate first stand having a base which is dimensioned to be slidably received in the groove formed in the cabinet;
 - a middle section located under the top section, the middle section having at least one drawer and at least one door; and
 - a bottom section located under the middle section for supporting the organizer on a surface.
2. An organizer according to claim 1 further comprising a necklace bar located on an inner surface of the door of the middle section.
3. An organizer according to claim 1 wherein the door in the middle section can be placed in an open state or a closed state wherein when it is placed in an open state the drawer is exposed and when it is in a closed state, the drawer is concealed.
4. An organizer according to claim 1 wherein the top section is detachable from the middle section.
5. An organizer according to claim 1 wherein the middle section is detachable from the bottom section.
6. An organizer according to claim 1 further comprising a necklace rack comprising a plurality of hooks affixed to a back wall of the organizer.

7. An organizer according to claim 1 wherein the stand has a pair of vertical supports extending upwardly from its base and a cross piece extending between the pair of vertical supports.
8. An organizer according to claim 1 wherein the drawer in the middle section houses dividers to create compartments.
9. An organizer according to claim 8 wherein the dividers are removable.
10. An organizer according to claim 8 wherein the dividers are adjustable to customize the interior of the drawer.
11. An organizer according to claim 1 wherein the drawer houses a ring holder.
12. An organizer according to claim 1 wherein at least some portions of internal surfaces in the cabinet and drawer are lined with anti-tarnish cloth.
13. An organizer according to claim 1 wherein the organizer is constructed of wood.
14. An organizer according to claim 1 further comprising a pivoting lid located above the pivoting cabinet of the top section.
15. An organizer according to claim 14 further comprising a mirror disposed on an inner surface of the pivoting lid.
16. An organizer according to claim 14 further comprising a mirror located underneath the pivoting lid, the mirror having an easel-style stand to support the mirror when the pivoting lid is opened.

17. An organizer according to claim 1 wherein the bottom section comprises a plurality of drawers.
18. An organizer according to claim 1 wherein the bottom section comprises a plurality of pivoting trays.
19. An organizer according to claim 1 wherein the bottom section comprises a plurality of legs.
20. An organizer according to claim 1 further comprising a secret compartment.
21. An organizer for the storage of jewelry, the organizer comprising:
a top section, the top section having a pivoting cabinet having a groove formed therein and a separate first stand having a base which is dimensioned to be slidably received in the groove formed in the cabinet; and
a middle section, the middle section located under the top section, the middle section having a plurality of drawers stacked one on top of the other and a pair of doors wherein the doors can be pivoted to an open position thereby exposing the plurality of drawers and the doors can be pivoted to a closed position to conceal the plurality of drawers.
22. An organizer according to claim 21 wherein at least one of the pair of doors has a necklace bar located on its inner surface.
23. An organizer according to claim 21 further comprising a bottom section located under the middle section for supporting the organizer on a surface.
24. An organizer according to claim 21 wherein the top section is detachable from the middle section.

25. An organizer according to claim 21 wherein the middle section is detachable from the bottom section.
26. An organizer according to claim 21 further comprising a necklace rack comprising a plurality of hooks affixed to a back wall of the organizer.
27. An organizer according to claim 21 wherein the stand has a pair of vertical supports extending upwardly from its base and a cross piece extending between the pair of vertical supports extending upwardly from its base and cross piece extending between the pair of vertical supports.
28. An organizer according to claim 21 wherein the drawer in the middle section houses divided compartments.
29. An organizer according to claim 21 wherein the drawer houses a ring holder.
30. An organizer according to claim 21 wherein at least some portions of internal surfaces of the cabinet and drawer are lined with anti-tarnish cloth.
31. An organizer according to claim 21 wherein the organizer is constructed of wood.
32. An organizer according to claim 31 further comprising a pivoting lid located above the pivoting cabinet of the top section.
33. An organizer according to claim 32 further comprising a mirror disposed on an inner surface of the pivoting lid.

34. An organizer according to claim 32 further comprising a mirror located underneath the pivoting lid, the mirror having an easel-style stand to support the mirror when the pivoting lid is opened.

35. An organizer according to claim 23 wherein the bottom section comprises a plurality of drawers.

36. An organizer according to claim 23 wherein the bottom section comprises a plurality of legs.

37. An organizer according to claim 21 further comprising a secret compartment.

38. An organizer according to claim 1 further comprising:

a second pivoting cabinet located in the top section, the second pivoting cabinet having a groove formed therein, the second pivoting cabinet being symmetrically arranged with respect to the pivoting cabinet; and

a second stand having a base which is dimensioned to be slidably received in the groove found in the second pivoting cabinet.

39. A jewelry organizer comprising:

a first pair of pivoting doors, each of the pivoting doors having a cabinet formed therein wherein a plurality of grooves are formed in a floor of the cabinet;

a plurality of separate stands, each stand having a base which is dimensioned to be slidably received in one of the grooves formed in the floor of the cabinets, each stand having a pair of vertical supports extending upwardly from each base and each stand having at least one cross piece extending between a pair of vertical supports; and

a drawer located underneath the first pair of pivoting doors.

40. A jewelry organizer according to claim 39 further comprising a second pair of pivoting doors located adjacent the drawer.

41. An organizer for the storage of jewelry, the organizer comprising:

a top section, the top section having a floor with a groove formed therein and a separate first stand having a base which is dimensioned to be slidably received in the groove formed in the cabinet; and

a middle section, the middle section located under the top section, the middle section having a plurality of drawers stacked one on top of the other and a pair of doors wherein the doors can be pivoted to an open position thereby exposing the plurality of drawers and the doors can be pivoted to a closed position to conceal the plurality of drawers.

42. An organizer according to claim 41 wherein the top section has a pair of doors which can be closed to conceal the groove and the first stand.

43. An organizer according to claim 41 further comprising a bottom section located under the middle section for supporting the organizer on a surface wherein the bottom section has a plurality of pivoting trays.

44. An organizer for the storage of jewelry, the organizer comprising:

a top section, the top section having a plurality of lift out drawers that are coupled to one another by a pair of hinges; and

a middle section, the middle section located under the top section, the middle section having a plurality of drawers stacked one on top of the other and a pair of doors wherein the doors can be pivoted to an open position thereby exposing the plurality of drawers and the doors can be pivoted to a closed position to conceal the plurality of drawers.

45. An organizer for the storage of jewelry, the organizer comprising:

a top section, the top section having an earring stand; and
a middle section located under the top section, the middle section having a drawer and a door located adjacent to the drawer.

46. The organizer according to claim 45 further comprising an earring stand located on an inner surface of the door wherein the earring stand can be rotated about an axis to gain access to both sides of the earring stand.

47. The organizer according to claim 45 wherein the top section has a grooved formed therein and the earring stand has a base which is dimensioned to be slidably received in the groove.

48. A jewelry organizer comprising:
a housing having an interior region and a door to gain access to the interior region;
an earring stand rotatably mounted to an inner surface of the door wherein the earring stand can be rotated about an axis to gain access to both sides of the earring stand.

49. The organizer according to claim 48 wherein the earring stand has a pair of vertical supports and a plurality of cross pieces extending between the pair of vertical supports.

50. An organizer for the storage of jewelry, the organizer comprising:
a top section, the top section having a plurality of drawers that in a first position are stacked one on the other and in a second position are slid out to an extended position to expose the interior of each drawer; and

a middle section, the middle section located under the top section, the middle section having a compartment for storing items.

51. The organizer according to claim 50 wherein the plurality of drawers include a first set of drawers and a second set of drawers symmetrically arranged with respect to the first set wherein the drawers.
